

## Wind Power Polar Diagram

**Totalised wind direction and power over a 30 day period.**

**Units :** ft<sup>6</sup> (Millions of feet run.)

In this example, wind came almost entirely from the West - mainly from the North West and South West, and a smaller amount from the South. The peak directions may represent distinct periods of weather during the period analysed, or that the site is exposed only to particular wind directions. Further periods might be needed to

*Data from sample site using Dicam and Barn Report data logging, 15 minute samples over 30 day period totaling 2,880 readings.*
